Comprehensive Community Field Practicum Report
(School Health Program)-Group B

Date: -

Venue:-

School health program is an important academic activity for General Medicine students that provides an opportunity to present and discuss about common health issue of the school level children. It enables students to apply theoretical knowledge in real-world contexts and simultaneously strengthens their communication skills and presentation abilities. Through the School Health Program, students develop greater confidence in self-presentation and professional conduct.

Common objectives include:

- To promote physical, mental, and social health of students
- To develop healthy habits and behaviours
- To enhance knowledge about common school health issue and their management
- To improve communication, counseling, and health education skills
- To promote teamwork, leadership, and professional confidence among participants
- To increase understanding of preventive, promotive, and rehabilitative health services.

Activities:

As per our curriculum of PCL General Medicine 3rd year students were posted for 60 days regarding “**Comprehensive Community Field Practicum**”, community posting. The school health program represents a key initiative within the community. Students successfully implemented the program at Durga Mavi Secondary School in Mangalbare, Morang, achieving notable success.

Conclusion:

School Health program was completed successfully as per objectives.

Thank you

AIHS, Damak
